THE AXCIENT BUSINESS CLASS SOLUTION™

Affordable enterprise class backup designed for small to medium size businesses.

> " We lost all the data on a large project when one PC failed. Within 15 minutes we were able to retrieve everything we had lost from your offiste backup. Thank you Axcient! "

-Steven M. Cox | AIA & President, HPC Architecture

It's easy as 1-2-3.

Step 1: Plug-and-Play Set-up

Data backup and disaster recovery are of paramount importance in today's business climate. Downtime of business critical data or applications can cost companies hundreds of thousands of dollars and force them to close their doors. In fact, 93% of all companies that loose their data for a period of 10 days or more end up filing for bankruptcy within one year.
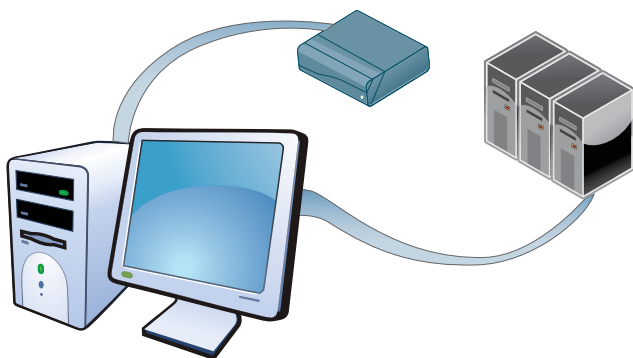

Now you have access to Enterprise Class backup and recovery without all of the IT hassles and expense.

Designed for small and medium-sized businesses the Axcient Uptiva is the comprehensive onsite and online backup solution that ensures your data is safe and that your business is protected from downtime due to data corruption or loss. Uptiva combines an onsite disk-based appliance that attaches to your existing network with ultrafast online backup to ensure your data is always safe and available for immediate restore.

Designed to work in every network environment and to interface with your critical file and application servers running Windows, Linux or Macintosh operating systems, Uptiva is designed for all companies — especially those that need high-availability of their data and have minimal downtime tolerance.

And because Axcient understands the IT limitations and budgetary constraints of small and medium sized businesses, we've designed our solution to require virtually no IT knowledge or support and to be very cost-effective. For most of our customers, the annual cost of a solution is less than the cost of lost revenues from just 2 hours of downtime.
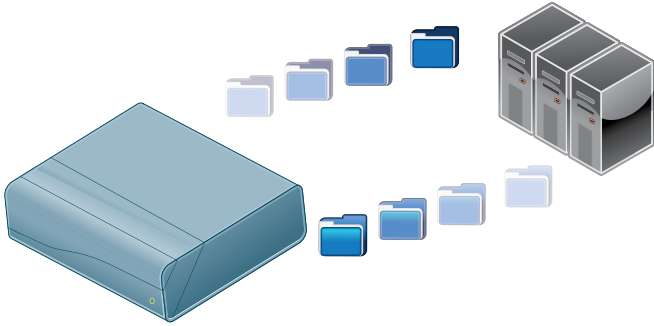

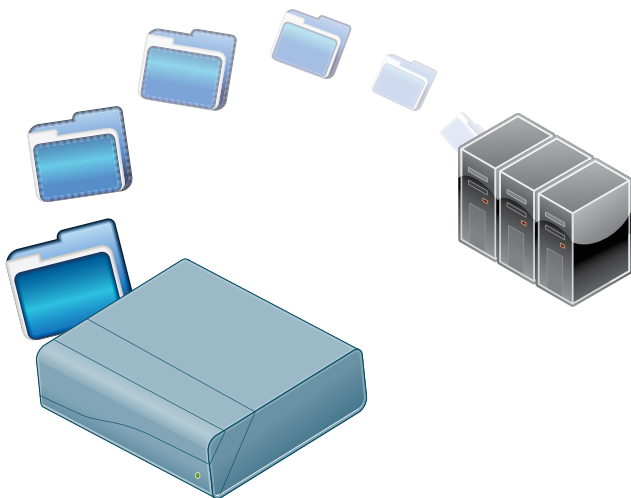

It's easy as 1-2-3 (continued)

Step 2: Automatic Backups

Step 3: Data Restore

How It Works

Uptiva is a disk-based appliance with optional RAID-5 redundancy. Using your internal wide area network, Uptiva backs up your desktops and servers at frequencies specified by you. Once your data is consolidated on the Axcient Uptiva appliance it is securely transferred and safely stored at one of Axcient's Class-A data centers where it is available 24x7 for immediate retrieval. Backups to Axcient's data center occur automatically at user specified intervals.

KEY FEATURES & BENEFITS

- Onsite and online backup in one device

- Easy to install and intuitive to use – setup takes less than 30 minutes

- Automated Backup – no more guesswork or manual processes

- VPN IPSec transfer protocol – the most secure data transport method, HIPPA, SOX compliant

- Customized "Snapshots" – users can setup automatic daily, weekly, monthly or annual snapshots and keep multiple versions of files for compliance adherence and protection against undetected data corruption

- Ultrafast backups and restores using bit-level transfer technology

- 24x7x365 access to data for recovery

- Simple drag-and-drop restores

- Email notification upon successful backup completion

- Cost-effective
